

PORT PILLOWS

This pillow with a velcro strap attaches to a seat belt to relieve pressure, pain, and possible irritation around the port.

Start with 2 - 5 1/2" square of fabric and 4" of velcro.

Make sure the velcro could be sewn into both sides (pieces) and it overlapped in the center of the square. Pin down if needed.

Sew around the square at 1/4" leaving a small opening about 1 1/2". The velcro is sandwiched in between both fabrics.

Cut the corners off making sure not to cut through the stitch line.

Turn right side out through the opening.

Stuff the pillow with fiberfill stuffing, and sew the opening closed.
